

### ABSTRACT OF THE DISCLOSURE

A liquid dispenser includes a liquid container enclosed by a support member that thermally insulates the container and provides rigidity for the overall structure. A cover encloses the support member and the liquid container, providing an added layer of insulation. Preferably, lightweight materials are used for the support and the liquid container. Materials for the support may include, for example, EPP, EPS or Arcel® material. Materials for the liquid container may include, for example, of polycarbonate, nylon, SAN, and polyethylene.
